

Push Bathroom Exhaust Past the Fascia & Help Prevent Dangerous Attic Mold

Go Beyond

SoffitFlow™

Made Of
High Density
Polyethylene

Proper ventilation is essential in any home. Bathroom exhaust fans help remove humid air, but where that air goes matters.

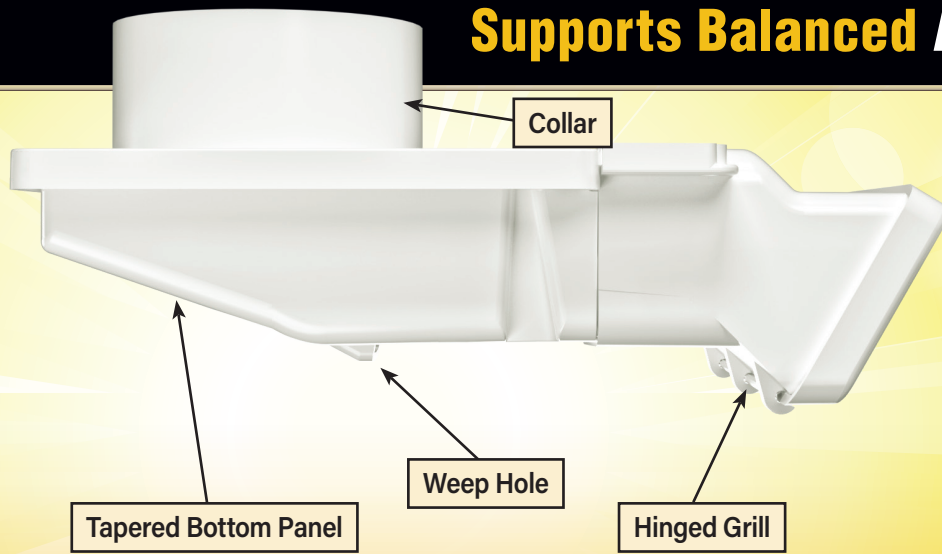

Traditional soffit vents can allow moisture to linger near the attic, affecting humidity levels and overall airflow. The SoffitFlow™ vent is designed to guide exhaust air beyond the fascia, directing it away from the home. Its streamlined design provides a clean, finished look.
