

Go Beyond & Push Bathroom Exhaust Past the Fascia

SoffitFlowTM

Smart Bathroom Venting

Exhaust Humid Air

Advanced design features and durable construction make SoffitFlowTM the safer choice for soffit venting. Its smart, removable grill helps prevent pest intrusion. An integrated gravity assisted damper fits tightly to help keep air moving in the right direction. The bottom weep hole lets water from condensation escape to help minimize algae or mold build-up.

Model SFV410

Quality Construction

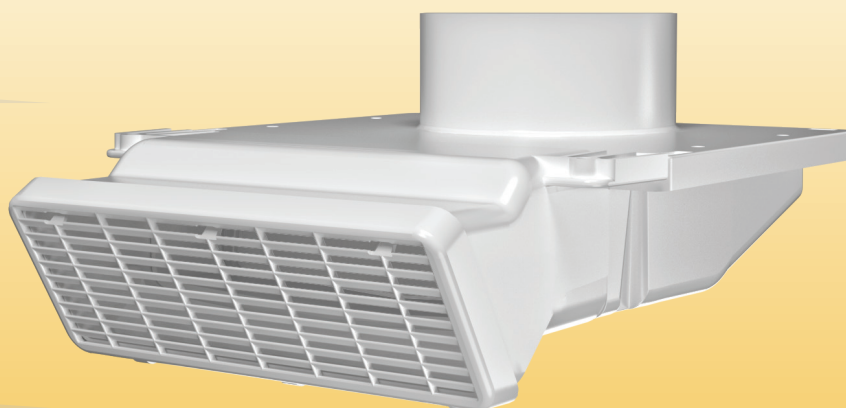

SoffitFlow is constructed from high-density polyethylene (HDPE), a material known for its exceptional durability and performance. SoffitFlow's durable three-piece design allows for easy access, quick removal, and simple cleaning.

How It Works

The patented SoffitFlow works much like a car's exhaust pipe, pushing toxic fumes past the rear of a car. The system pushes warm moist air out past the fascia.

Attic Ventilation

Traditional soffit vents can allow moisture to linger near the attic, affecting humidity levels and can lead to the growth of dangerous mold. The SoffitFlow vent is designed to guide humid exhaust air beyond the fascia, directing it away from the home.
